   (3) The portion of the receiving waters that may be allowed for mixing of
       wastes (the mixing zone) shall be determined by the Board on a case by case basis
       with definite limits placed on the dimensions of the mixing zone depending on the
type of wastes being discharged and the various chemical, physical and biological conditions occurring in the receiving water.

(4) If reliable scientific evidence indicates that the standards are not appropriate for particular waters or for the uses of those waters, the standards shall be modified by the Board to meet the requirements pertaining specifically to those waters and the uses of them.

(5) The water quality standards shall be subject to change only when scientific advances necessitate their modification.

(6) The water quality standards specify, unless stated otherwise, maximum permissible levels or limits of various substances and parameters unless the natural level is greater.
